Specification

The disclosure is objected to because of the following informalities: the specification does not clearly link structure and function for the “mounting means...” and “heating means...” 112, 6th paragraph limitations used in the claims.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claims 15, 17-31 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The phrases “mounting means for ...mounting” and “heating means ...” in claims 15 and 21 invoke 112, 6th paragraph, but the specification lacks an explicit link between structure and function, and therefore the specification does not adequately describe the invention. The phrases could be deleted and replaced by corresponding method limitations.

Claims 15 and 17-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 15, the term “close” is a relative term that renders the metes and bounds of the claim unclear. It is unclear what temperature range encompasses a temperature that is “close” to the glass transition temperature. The specification and the prior art do not define the term.

In claim 15, line 12, it appears that "said pre-selected first temperature" should read - - a pre-selected first temperature- - in order to have proper antecedent basis for the term in the claim.

The metes and bounds of the claims are unclear since it is unclear what structure corresponds to the mounting means and the heating means.

Claims 16-17 and 17-21, 23-31 do not cure the indefiniteness of their base claim, and are therefore also rejected.

Response to Arguments

Applicant's arguments filed 6/21/04 are persuasive, except as noted below. The claims are allowable over the prior art. Chou '905 and Davis both teach cooling to below the glass transition temperature, not above.

As to the 112, 2nd paragraph rejection, applicant's arguments are not persuasive. It is unclear what range encompasses "close" – is it 5°, 10°, 20°?
